and animal parks

VIVOBASE PROTECTS ALL LIVING BEINGS AGAINST ELECTROMAGNETIC RADIATION BY ACTIVATING A NATURAL PROTECTIVE SHIELD

For horse farms and riding centres, livestock farmers and animal parks

Due to rapidly increasing technological progress, pollution of the environment due to electrosmog is becoming an ever more important issue. In our view, electromagnetic radiation caused by, for example, cell towers, GPS, microwaves, Bluetooth, Smart Home, mobile phones, DECT telephones and WLAN, has massive effects on the health of all living creatures. The progressive technologisation in and on stables and livestock sheds, e.g. through electronically controlled horse walkers, milking robots and automatic feeders, also increases electrosmog pollution for humans and animals. Because of their generally central location in big cities, animals in animal parks and zoos are exposed to high electric smog levels. Many scientists and doctors see possible connections between damage to health and electromagnetic radiation (see the International Doctors' Appeal*). The hearts and brains of humans and animals

are controlled and regulated by internal pulses of bioelectricity. When we are exposed to artificial electromagnetic fields, this can have a fundamental effect on biological processes in our bodies. The danger to living creatures from electromagnetic radiation remains a controversial subject of debate. Everyone must reach their own conclusion on this question. A good overview of the current state of scientific knowledge concerning electromagnetic fields and their effects can be found on the website of the German Federal Office for Radiation Protection**.

You will find information and studies on the effectiveness of VIVOBASE on our homepage www.vivobase.de.

Physical behavior of water molecules using VIVOBASE

With VIVOBASE protection: the body is shielded against electro smog and earth radiation. VIVOBASE generates an electrostatic field, which is able to align water molecules within the body that creates a protective wall against the radiation.

Without VIVOBASE protection: electromagnetic rays can penetrate the body unopposed.

VIVOBASE ANIMAL

VIVOBASE ANIMAL protects the bodies of humans and animals against electrosmog by activating a natural protective shield. VIVOBASE ANIMAL is available as a thief proof and splash proof wall mounted device.

Application:

- › in horse stables and livestock sheds
- › in riding centres and riding halls
- › in animal parks and zoos

Range:

approx. 40 m (radius), through walls and ceilings

Sales:

VIVOBASE GmbH / Lilienthalweg 13 / 72124 Pliezhausen / Phone +49 (0) 7127 950 31 80 / info@vivobase.de / www.vivobase.de

Important instruction: no healing promises are made concerning any of VIVOBASE GmbH's products. The scientific research by Bion, Institute for Bioelectromagnetics and New Biology, Ltd., in Slovenia, document the working methods of the VIVOBASE products. The trial setup can always be retraced and reproduced.
